

## Digital Diesel Fuel Pressure Tester

- Designed to be used on diesel engines which require a fuel pressure sensor reading to be monitored by the vehicle computer
- Reads the diesel fuel pressure via the fuel pressure sensor - simple one wire connectivity
- No fittings required, uses a piercing clip on signal wire to measure pressure signal, whilst the engine is running
- Range: 0-1500 BAR or 0-22000psi
- Readings alternate between MAX & current pressure
- Allows for comparison of live pressure data to ECU pressure data
